Post installation of UIDAI's QR code reader application, QR code of e-Aadhaar need to be scanned using the physical scanner in line with UIDAI Specifications. The application will display the demographic details of Aadhaar number holder once the QR Code is digitally verified using Windows QR code scanner.

Who all can use secure QR code?

Any Aadhaar Holder or any User/Service Agencies like Banks, AUAs, KUAs, Hotels etc can use this facility for offline verification of the data in Aadhaar.

Aadhaar Paperless Offline e-kyc

What is Aadhaar Paperless Offline e-KYC?

It is a secure sharable document which can be used by any Aadhaar number holder for offline verification of Identification.
An Aadhaar number holder desirous of using this facility shall generate his/her digitally signed Offline XML by accessing UIDAI website. The Offline XML will contain Name, Address, Photo, Gender, DOB, hash of registered Mobile Number, hash of registered Email Address and reference id which contains last 4 digits of Aadhaar Number followed by time stamp. It will provide Offline Aadhaar Verification facility to service providers/Offline Verification Seeking Entity (OVSE) without the need to collect or store Aadhaar number.

How to generate Offline Aadhaar XML?

The process of generating Aadhaar Offline e-KYC is explained below:
• Go to URL https://myaadhaar.uidai.gov.in/offline-ekyc
• Enter 'Aadhaar Number' or 'VID' and enter mentioned 'Security Code' in screen, then click on 'Send OTP'. The OTP will be sent to the registered Mobile Number for the given Aadhaar number or VID. OTP will be available on Aadhaar mobile Application of UIDAI. Enter the OTP received. Enter a Share Code which be the password for the ZIP file and click on 'Download' button
• The Zip file containing the digitally signed XML will be downloaded to device wherein the above mentioned steps have been performed. The Offline Aadhaar XML can also be downloaded from Aadhaar app. In next step, after successful validation, i.Select the required details which you want to download by clicking

the radio button. ii.Enter the desired ‘Share Code’ for the ZIP file in the provided field with required parameters as indicated in screen iii.Enter the ‘Security Code’ and press ‘Submit’ button The Zip file containing the digitally signed XML will be downloaded to device wherein the above mentioned steps have been performed. Extract the zip file using the password as specified in previous step and save the XML file in the desired location

Who are the users of this Aadhaar Paperless Offline e-KYC?

Any Aadhaar number holder who desires to establish his/her identity to any service provider (OVSE) using digitally signed XML downloaded from UIDAI website can be a user of this service. The service provider should have provisions of providing this Aadhaar Paperless Offline e-KYC at their facility and do the offline verification

How to share this Paperless Offline eKYC document with the service provider?

Aadhaar number holders can share the XML ZIP file along with the Share Code to the service provider as per their mutual convenience.

How will service providers use Aadhaar Offline e-KYC?

The process of Aadhaar Offline e-KYC Verification by Service Provider is:

- Once service provider obtains the ZIP file, it extracts the XML file using the password (share code) provided by the Aadhaar number holder.
- The XML file will contain the demographic details such as Name, DOB, Gender and Address. Photo is in base 64 encoded format which can be rendered directly using any utility or plane HTML page. Email Address and Mobile number are hashed.
- Service Provider has to collect Email Address and Mobile number from Aadhaar number holders and perform below operations in order to validate the hash:

Mobile Number:

Hashing logic: Sha256(Sha256(Mobile+ShareCode))*number of times of last digit of Aadhaar Number

Example : Mobile number: 9800000002

Aadhaar Number: 123412341234

Share Code: Abc@123

Sha256(Sha256(9800000002+ Abc@123))*4

In case if Aadhaar Number ends with Zero or 1 (123412341230/1) it will be hashed one time.

Sha256(Sha256(9800000002+ Abc@123))*1

Email Address:

Hashing Logic: This is a simple SHA256 hash of the email without any salt

- Entire XML is digitally signed and Service Provider can validate the XML file using the signature and public key available on the UIDAI website. (https://uidai.gov.in/images/uidai_offline_publickey_26022019.cer).

Can this Offline Paperless eKYC document be shared to other entities by the Service Provider?

Service Providers shall not share, publish or display either XML or Share Code or its contents with anyone else. Any non-compliance of these actions shall invite actions under Sections 29(2), 29 (3), 29(4) and 37 of The Aadhaar Act, 2016 (as amended) and sub regulation 1A of regulation 25, regulation 14A of The Aadhaar (Authentication and Offline Verification) Regulation, 2021 and regulation 6 and 7 of The Aadhaar (Sharing of Information) Regulation, 2016.

How this Aadhaar Offline Paperless eKYC document is different from the other identification documents produced offline by individuals?

Identity verification can simply be accomplished by providing an identity document like PAN card, Passport etc to the service provider. However, all these documents, which may be used

for identification can still be forged and faked which may or may not be possible to verify offline instantaneously. The document verifier has no technological means to verify the authenticity of the document or the information it contains and has to trust the document producer. Whereas, the XML file generated by the Aadhaar number holder using Aadhaar Paperless Offline e-KYC is digitally signed document using UIDAI digital signature. Thus, the service provider can verify the demographic contents of the file and certify it to be authentic when doing the offline verification

Where can I find the Public Certificate for Digital Signature validation?

Public certificate for Digital signature validation can be downloaded from here .

Biometric Lock/Unlock

What is Biometric Locking?

Biometric Locking/Unlocking is a service that allows an Aadhaar holder to lock and temporarily unlock their biometrics. This facility aims to strengthen privacy and confidentiality of Aadhaar number holder's Biometrics Data.

What all Biometric data can be locked?

Fingerprint, iris and Face as a biometric moadlity will be locked and after biometric locking, Aadhaar holder will not be able to perform the Aadhaar authentication using the above mentioned biometric modalities.

What happens when Biometric is locked?

Locked Biometrics confirms that Aadhaar holder will not be able to use Biometrics (fingerprints/iris/Face) for authentication, it is a safety feature to stop any kind of biometric authentication. It also ensures that any entity by any means cannot perform biometric based Aadhaar authentication for that Aadhaar holder.

How to Unlock (locked)Biometrics?

Once Aadhaar number holder enables Biometric Locking system their biometric remains locked till the Aadhaar Holder chose any below mentioned option: Unlock it (which is temporary)or Disable the Locking system The biometric unlock can be done by Aadhaar number holder either by visiting UIDAI website, enrolment centre, Aadhaar Seva Kendra(ASK), through Aadhaar app. Note: Registered Mobile Number is essential to avail this service. In case your mobile number is not registered with Aadhaar visit the nearest Enrolment Centre/Mobile Update End Point.

Who and when to lock Biometrics?

Aadhaar number holders who have registered mobile number may lock their biometrics. This facility aims to strengthen privacy and confidentiality of Aadhaar number holder 's Biometrics Data After locking biometrics if a UID is used for invoking any of the Authentication services using a biometric modality (Fingerprint/Iris/Face) a specific error code '330' indicating biometrics are locked will be displayed and the entity will not be able to perform the biometric authentication.

Aadhaar SMS Service

Do I need to generate OTP for all Aadhaar SMS services?

OTP Auhtentication is must for Aadhaar Lock/unlock and Biometric Lock/unlock Function. You don’t need OTP for VID Generation & Retrieval function. To get OTP send SMS -> GETOTP LAST 4 or 8 DIGITs of Aadhaar Number Example - GETOTP 1234.

How to Lock/Unlock Aadhaar Number with SMS service?

For Locking Aadhaar Number: Send OTP request as -> GETOTP LAST 4 or 8 DIGITs of Aadhaar Number Then send Locking Request as -> LOCKUID Last 4 or 8 DIGIT of Aadhaar Number 6

DIGIT OTP You will get a confirmation message for your request. Once it is locked you will not be able to perform any form of Authentication (Biometric, Demographic or OTP) using your Aadhaar Number. However, you can still use your latest Virtual ID for performing Authentication. For Un-Locking Aadhaar Number you must have your latest Virtual ID. Send OTP request with last 6 or 10 DIGITs of Virtual ID number as -> GETOTP LAST 6 or 10 DIGITs Virtual ID Then send Unlocking Request as -> UNLOCKUID LAST 6 or 10 DIGIT Virtual ID 6 DIGIT OTP

My SMS is not being sent. What should I do?

Please check if your SMS service is working properly. In case of any issue with respect to the SMS not being sent, kindly contact your telecom service provider. It may be a case of bad network or non-functioning SMS service or low Balance etc
